Experience

EksperOne
Aug 2026 – Present

Founder & Sole Engineer

SaaS and desktop software for vehicle damage appraisal offices · eksperone.com

- Shipped an offline plate-recognition desktop app (C#, YOLOv9 + OCR) that cut photo-sorting time from **40 min to 5 min**. Currently deployed at 2 offices.
- Built a **multi-tenant case-management platform** (.NET 10, PostgreSQL, React/TypeScript) with role-based access and audit logging.
- Added mobile photo capture and customer upload links, removing manual photo transfers.
- Owned **end-to-end delivery**: CI/CD, Docker, VPS deployment and Windows packaging.
- Gathered requirements directly from appraisal experts.

TWINSOFT GmbH & Co. KG
Jan 2026 – Present

Software Engineer Working Student Ratingen, Germany

- Developed new features for a **biometric authentication mobile application**, improving usability, reliability, and security across core user flows.
- Designed and implemented a **health-check and diagnostics feature** that accelerated troubleshooting and helped pinpoint failure points across services and application components.

Rheinmetall
Aug 2024 – Dec 2025

Software Engineer Working Student Neuss, Germany

- Contributed as a core team member to the development of an internal logistics part management system using .NET Framework.
- Resolved **60% of previously known issues**, significantly improving system stability and functionality.
- Boosted application performance by **20%** through strategic code restructuring and rigorous optimization of key system functionalities, leading to faster loading times and reduced memory usage.
- Refactored legacy components to improve maintainability, reduce technical debt, and support faster feature delivery.

ASELSAN
Nov 2021 – Apr 2024

Software Engineer Ankara, Türkiye

- Led development of a Flutter-based smart city application designed to serve approximately **2,000,000 users**.
- Engineered back-end services capable of handling **1,000,000 data entries daily** for Türkiye's nationwide highway toll collection and traffic monitoring systems, optimizing data flow and storage using .NET Framework.
- Designed and built 2 predictive models for climate and air quality forecasting using Python, time-series analysis, and machine learning techniques.
- Collaborated with municipal governments and cross-functional teams to support seamless integration of the smart city platform and advance city-wide digital transformation efforts.

Education

Rheinische Friedrich-Wilhelms-Universität Bonn
Apr 2024 – Sep 2027

M.Sc. Computer Science

Kadir Has University
Sep 2018 – Jul 2022

B.Sc. Computer Engineering

- Graduated **3rd in the department** with a 3.73 GPA, earning high honors for academic excellence. Completed a thesis project focused on image recognition techniques to detect sea mucilage (marine mucilage).

Jacobs University
Jan 2021 – May 2021

Computer Science · Erasmus+ exchange

Skills

Python · .NET · C# · SQL · Flutter · Git · TypeScript/JavaScript · Go · React

Publications

Air Quality Forecasting Using Time Series Models: A Comparative Study
2023

IntelliSys

Accepted for publication and presentation at IntelliSys 2023 in Amsterdam, Netherlands.
